Research Focus

My research involves combining computational imaging with machine learning to make small, cheap, and capable task-specific cameras. My work is at the intersection of signal processing, optics, optimization, compressive sensing, and machine learning. I've worked on speeding up inverse problems using unrolled optimization, single-shot 3D microscopy, and I'm currently working on on-chip compressive hyperspectral imaging.

Keywords: signal processing, optics, inverse problems, compressive sensing, optimization, machine learning
